

Australian Pool Covers

Made for the harshest places on earth

The material has the highest uv and chlorine protection in the world. Our covers out perform any other cover ever produced, and that's a guarantee!

- Up to 10°C warmer
- Extend summer by up to 3 months
- Virtually eliminates evaporation
- Saves up to 10,000 litres of water per month
- Saves chemicals
- Out performs every other cover available today!

Australian Pool Covers

Solar Blankets

Solar Blankets will increase pool water temperature by 10 to 15 degrees and will reduce heating costs up to 75%. Pool water stays warmer longer, therefore extending the swimming season. Most heat loss in a pool is caused by evaporation. A solar blanket will trap the heat in and reduce evaporation by around 95% and will save up to 50% on pool chemical usage while the pool is covered. The blanket also acts as a barrier to prevent leaves and debris from entering the pool, thereby reducing maintenance time.

Safety covers

Aquaguard is a strong reliable safety cover. A reinforced fabric is led and held by aluminium rails. Because the fabric is not stretched the water can easily support the weight of several people. What's more the cover ensures that the pool is completely covered, totally protecting the water from dirt and debris.

The cover comes in two versions, a manual system and a fully automatic hydraulic system. The automatic version is driven by a proven, reliable hydraulic motor which keeps all electrical parts well away from the water.

Water Evacuation. Any small amount of rainwater on the cover is evacuated through a gauze in the fabric when the cover is opened. Any leaves or dirt that may be present will also be contained and can be easily removed.

Safe & hard wearing

How solar blankets work

Solar Blankets are made from a film of thousands of tiny bubbles, which work together to collect and retain heat in your pool. The Solar Blanket floats on top of the water and allows the sun's energy to pass through. The blanket then traps the energy as retained heat in the pool. The material is also ideal for use as thermal blankets for heated pools.

Our cover out performs every other cover available today!
